Each residence has a proper name, given by the owner at a special feast. Houses are usually clean. 552 356

Household furniture.—Hammocks are made by a netlike technique of tucum thread of different colors; they are now used only for daytime resting. Clothes are kept in large baskets. 513 296

On the struts and rafters of the house one can often see remnants of the paraphernalia of feasts: masks, turury fringes, drums, and dance sticks. Ears of maize hang from the frame of the house or are piled in the loft. 352

The *Tucuna* never build a fire or eat in the dwelling. The kitchen is always a small separate house. Fire was formerly produced by drilling a horizontal piece of wood, which was placed over two cross pieces. There is, however, a tradition that even in old times they made fire by striking two stones. [343] 372

Fire fans are made exclusively of large bird wings. [412]

The *Tucuna* have plenty of small four-legged stools, either rectangular or oval, made from a single piece of wood, sometimes elaborately carved in the shape of a chelonian or batrachian. 352 532

TRANSPORTATION

Formerly, the *Tucuna* traveled largely on land, although on the small streams they used small primitive canoes made of paxiuba palm. From the *Omagua* they learned to make "ubá" type dugout canoes, and from the Neo-Brazilians to make "casco" type dugouts which were widened by heating them over a fire. These are sometimes provided with round shields (rodellas) and gunwales. *Tucuna* canoes are so well made that civilized people seek them. Paddles have crutch handles and a round blade with a large point. The blade and the crosspiece on the end of the handle, but not the handle, are invariably painted black. 501 [177]

DRESS AND ORNAMENTATION

Formerly, both sexes trimmed their hair slightly over the brows, and used a comb made of twigs held between two parallel sticks. 302

Both sexes used to pierce their ear lobes; only women do so now. Through the hole they usually wore little plates of white wood; on feast days they inserted small rods with feathers on the front end, from which a small metal plate hung. Women's plates were triangular, men's moon-shaped. Long ago they pierced the nasal septum, through which they had put a little rod of *Gynerium*. They also used to tattoo the face, which at one time may have indicated clans. There are still recollections of circumcision of girls, but not of men, as described by Father Noronha in 1768. 304 301 [174] [114]

291 Men formerly wore a belt with one apron of turury inner bark in front and another behind. The penis was stuck under the belt. Women [174] perhaps at first went about entirely nude, but later adopted a short cloth of turury or of woven cotton, wrapped around the hips. Men wore 301 bracelets with long feathers and necklaces of teeth (pl. 65, *bottom*). At 292 feasts chiefs wore a cap of feathers mounted on a cotton or *Bromelia* net, or large diadems.

MANUFACTURES

532 **Bark cloth.**—Various masks and zoomorphic figures are made of bark 287 cloth (pl. 64).

285 **Basketry.**—Clothes baskets are made of uarumã stalks with a round opening closed with a lid. Four points are drawn up and down over the lid and the bottom, the latter serving as legs. Other baskets have a flat square lid and bottom. Both types of baskets are made in all sizes, from 2 to 16 inches (4 to 40 cm.) in diameter. Burdens are carried [482] in large conical baskets hexagonally woven of liana, or in cylindrical baskets of uarumã stalks. These are supported by an embira-fiber tumpline. The *Tucuna* also use pouches of looped tucum threads.

323 **Pottery.**—Women and sometimes men still make bowls, dishes, pans, [531] and pots of clay, which are decorated with painted or modeled ornaments. [776] Potter's clay is gathered according to certain rules so as not to anger its owner, a water demon who appears in the shape of the western rainbow.

415 **Gourds.**—Gourds are covered with a black lacquer, and may bear de- 531 signs in indelible red pigment. Wooden spoons are carved, sometimes in fantastic shapes.

411 **Weapons.**—The bow is 6½ feet (2 m.) long with the ends notched to hold the string. It is now rare, even as a fishing weapon. The hunting arrow has a poisoned wooden head and feathering of the arched type. Arrows are 5 feet 4 inches (1⅗ m.) long. Spears have three types of points: (1) a poisoned, wooden point with four corners; (2) an iron point; and (3) a plain pointed stick. The last two are still used to hunt jaguars and peccaries. The *Tucuna* blowgun is over 10 feet (3 m.) long, and the darts 1 foot (30 cm.) long. The poison [278] is the most effective of any made in the Amazon Basin, but its manu- [178] facture, which requires much time and care, is now being forgotten. [231] Hunting dogs, which are of little use, are, according to tradition, pre- [173] Columbian.

SOCIAL AND POLITICAL ORGANIZATION

181 The *Tucuna* are industrious and hard working, kind to their friends, honest, patient, and hospitable. But they are more liable than other Indians [762] to great outbursts of sudden anger, a trait which sometimes leads them to suicide. This is a manifestation of their individualism and desire to live
